Student AI Guide: Get Ready and Start

Friday, October 16: meet at **1:45 p.m. Central**, Seigenthaler Center. Bring your laptop and charger. The workshop runs **2:10-3:00 p.m.** Ask Jesse whenever you are unsure.

Your job: help the table choose a question, use a skill, judge the analysis, and publish its reviewed report. Contribute your own perspective too.

Repository: https://github.com/vanderbilt-ai-studies/chancellors-circle-ai-workshop

1 Open the kit in Claude Code

Clone the repo or download and unzip it. Open the folder containing README.md and CLAUDE.md. Ask Claude:

TYPE INTO CLAUDE CODE

Read README.md and CLAUDE.md. Check that all five workshop skills and their prepared materials are readable. Do not start an exercise yet.

2 Check that you are ready

Check Claude Code and GitHub sign-in, repository access, power, and Wi-Fi. Keep output/pdf/backup-pack.pdf available offline. Start a fresh conversation for the table.

3 Explain an agent and a skill

Say: "An agent can work toward a goal by using tools, checking results, and adjusting its next step. A skill gives it a reusable process and materials for a particular task."

You help operate Claude Code and answer questions. Members can try it too. Everyone judges the work.

4 Choose the industry and question

Ask: "Which industry do we know? What could agents make possible in three to five years?" Write down the table's initial expectation before Claude analyzes it.

5 Choose one skill and start it

Approach	Ask this	Type into Claude Code
Research	Is it happening?	/workshop-research
Simulation	What would change?	/workshop-simulation
Role playing	Who sees it differently?	/workshop-role-play
Forecasting	Faster or slower change?	/workshop-forecasting
Problem solving	What could stop it?	/workshop-problem-solving

Show the chosen .claude/skills/[skill-name]/SKILL.md: its name, description, and one timed step. Type the command in the **Claude Code conversation**. Add the industry's question, for example:

TYPE INTO CLAUDE CODE

/workshop-research Our industry is retail. Could agents help a small retailer compare product ideas? Guide us one step at a time. We have 20 minutes.

Start a 20-minute timer. Choose one approach to begin; switch if another question becomes more useful. If the table is stuck, offer the prepared advisory-firm case.

Student AI Guide: Guide, Summarize, and Submit

6 Keep the discussion moving

Read each question aloud. Let people answer, then type their views into Claude. Invite disagreement and corrections. Name a real action as it happens: "It opened this source" or "It calculated from these assumptions."

Ask: "Are these reasonable conclusions? What are we assuming? What would make this fail?" Keep evidence separate from invented numbers and imagined reactions.

To change approaches, say: "Switch to role playing. Keep our notes. We have eight minutes left." Keep the same timer.

7 At minute 16, ask for the draft

TYPE INTO CLAUDE CODE

We have four minutes left. Collect our ideas and draft our short scenario brief using templates/scenario-brief.md. Include a succinct, one-paragraph summary.

8 Review it and name your table

Read the summary aloud. Correct it together. Keep the assumptions, uncertainty, and any disagreement. Ask the table to **choose its own name**.

The report should capture the change, evidence, plausible future, human contributions, biggest uncertainty, and changed thinking. The paragraph summary goes at the top.

9 Ask Claude to commit and push it

Replace [TABLE NAME] and [INDUSTRY] below with the table's actual choices. Use this after the table has reviewed the report:

TYPE INTO CLAUDE CODE

Our table is named [TABLE NAME]. Our industry is [INDUSTRY]. We have reviewed our analysis and its one-paragraph summary. Follow docs/report-out.md to save our well-formatted report under report-out/ as [table-name]-[industry]-analysis.md. Commit and push it to the workshop repository, include our table in the Report out page, and give us the published link when verified.

Use lowercase words with hyphens in the filename. Example: **Future Builders** + **Healthcare Operations** becomes future-builders-healthcare-operations-analysis.md. Claude can form the filename for you.

10 Verify and report back

Open the published link. Check that your table has its own section in **Report out**, with its summary and a link to the full analysis. Prepare this 30-second report:

"We explored ___. We were surprised by ___. Our biggest uncertainty is ___."

Keep the report ready for the student-preparation discussion. Jesse will confirm whether you join that following session.

IF SOMETHING GOES WRONG

Skill missing: ask Claude to read the chosen SKILL.md and follow it directly. **Claude or Wi-Fi unavailable:** use the backup pack on paper. **Push fails:** keep the Markdown file and ask Jesse to push it. A local save alone is not a finished submission.
