What could change in an industry you know?

You talk. The student helps run Claude Code. Together, you judge the work.

1. **Pick an industry.** Choose one someone at the table knows.

2. **Pick one change.** Finish: "AI agents might make it possible to ___." Say what you expect before you begin.

3. **Choose one way to explore it.** Choose research, simulation, or role playing from the menu below.

4. **Try it for 20 minutes.** Ask questions. Challenge the answers. Add your experience.

5. **Test it.** What would make this fail? Who might resist? What are we assuming?

6. **Write one page together.** What did you find? What could happen? What must people still do? What changed in your thinking?

Choose this	To ask this	Do this together
Research	Is it happening?	Check examples and contrary evidence.
Simulation	What changes?	Change one assumption and compare results.
Role playing	Who sees it differently?	Take roles, disagree, then revise the idea.

Stuck? Try this: Could a small advisory firm use agents to prepare more client briefs? The student has a ready-made case.

Keep asking: "What did the agent miss?" "What would change our minds?"

Use public examples. Made-up numbers and imagined reactions are starting points to test.

Your brief will inform the discussion about preparing students for these possible futures.

Report back: "We explored ___. We were surprised by ___. Our biggest uncertainty is ___."
